

# Missouri Weekly Influenza Surveillance Report 2020-2021 Influenza Season<sup>1</sup>

**Week 12: March 21, 2021 – March 27, 2021**

*All data are preliminary and may change as more reports are received.*

## Summary:

- The estimated influenza activity in Missouri is Sporadic<sup>2</sup>.
- During Week 12 a total of 23 laboratory-positive<sup>3</sup> influenza cases (8 influenza A and 15 influenza B) were reported. A season-to-date total of 1,563 laboratory-positive influenza cases (687 influenza A, 857 influenza B, and 19 untyped) have been reported in Missouri as of Week 12. The influenza type for cases reported season-to-date includes 44 % A, 54.8 % B and 1.2 % untyped. No laboratory-positive cases of influenza were reported by the Missouri State Public Health Laboratory (MSPHL) during Week 12. The percentage of respiratory specimens testing positive for influenza in Missouri laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) also remained low during Week 12 (Figure 5).
- Influenza-like illness (ILI) activity was below baseline for the hospital emergency room visit chief complaint data reported through ESSENCE. The reported percentage of visits for ILI 0.95 % (Figure 6) through ESSENCE.<sup>4</sup> The ILI data from a small number of sites located in the Northwest Region of the state is currently unavailable in ESSENCE. Therefore, the ILI data for the Northwest Region should be interpreted with caution.
- A season-to-date total of one influenza-associated death has been reported in Missouri as of Week 12<sup>5</sup>.
- No influenza or ILI-associated outbreaks or school closures have been reported in Missouri as of Week 12.
- Seasonal influenza activity in the United States remains low. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at <http://www.cdc.gov/flu/weekly/fluactivitysurv.htm>.

---

<sup>1</sup>The 2020-2021 influenza season begins CDC Week 40 (week ending October 3, 2020) and ends CDC Week 39 (week ending October 2, 2021).

<sup>2</sup>Sporadic is defined as: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.

<sup>3</sup>Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

<sup>4</sup>Influenza-like illness (ILI) is defined by ILINet as fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat without a known cause other than influenza. ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIFevers).

<sup>5</sup>All influenza-associated deaths became reportable in Missouri in 2016.

## Surveillance Data:

### Interactive Maps

The jurisdiction-specific influenza data are provided through interactive maps available at <https://arcg.is/004CCr0>. Click on the jurisdiction to view the influenza data specific to that jurisdiction.
