

Missouri Weekly Influenza Surveillance Report 2019-2020 Influenza Season¹

Week 47: November 17, 2019 – November 23, 2019

All data are preliminary and may change as more reports are received.

Summary:

- The estimated influenza activity in Missouri is Sporadic².
- A total of 103 laboratory-positive³ influenza cases (58 influenza A and 45 influenza B) were reported during Week 47. The season-to-date total of laboratory-positive influenza cases is 1,083 (51.4% influenza A, 47.8% influenza B, and 0.8% untyped). No laboratory-positive cases of influenza were reported by the Missouri State Public Health Laboratory (MSPHL) during Week 47. The percentage of respiratory specimens testing positive for influenza in Missouri laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) increased during Week 47 (Figure 6).
- Influenza-like illness (ILI) activity was below baseline the Missouri Outpatient ILI Surveillance Network (ILINet) and above baseline for the hospital emergency room visit chief complaint data reported through ESSENCE. The reported percentage of visits for ILI was 1.11% (Figure 5) and 2.57% (Figure 7) through ILINet and ESSENCE respectively.⁴ The ILI data from a small number of sites located in the Northwest Region of the state is currently unavailable in ESSENCE. Therefore, the ILI data for the Northwest Region should be interpreted with caution.
- One influenza-associated death has been reported in Missouri as of Week 47.⁵ During Week 46, 41 deaths involving Pneumonia and Influenza (P&I) were reported to the Bureau of Vital Records, resulting in a season-to-date total of 267 P&I associated deaths in Missouri.⁶
- No influenza or ILI-associated outbreaks or school closures have been reported in Missouri as of Week 47.
- Seasonal influenza activity in the United States continued to increase during Week 46. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at <http://www.cdc.gov/flu/weekly/fluactivitysurv.htm>.

¹The 2019-2020 influenza season begins CDC Week 40 (week ending October 5, 2019) and ends CDC Week 39 (week ending September 26, 2020).

²Sporadic is defined as: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.

³Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

⁴Influenza-like illness (ILI) is defined by ILINet as fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat without a known cause other than influenza. ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIFevers).

⁵All influenza-associated deaths became reportable in Missouri in 2016.

⁶The P&I data are available one week later. The P&I data for the CDC Week provided is the most current data available.

Surveillance Data:

Data Figures

Figure 1. Number of Laboratory-positive[†] Influenza Cases by Influenza Type, Missouri, CDC Week 47 (November 17, 2019 – November 23, 2019)*

Influenza Type	Week 45	Week 46	Week 47	2019-2020* Season-to-Date
Influenza A	85	87	58	557
Influenza B	71	91	45	518
Influenza Unknown Or Untyped	1	2	0	8
Total	157	180	103	1,083

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins week ending October 5, 2019 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv).

Figure 2. Number of Laboratory-positive[†] Influenza Cases and Case Rates by Age Group, Missouri, CDC Week 47 (November 17, 2019 – November 23, 2019)*[‡]

Age Group	Week 47 Cases	Week 47 Rate [‡]	2019-2020* Season-to-Date	2019-2020* Season-to-Date Rate [‡]
00-04	26	6.95	215	57.43
05-24	33	2.06	338	21.07
25-49	19	0.99	242	12.65
50-64	13	1.05	157	12.70
65+	12	1.26	131	13.72
Total	103	1.69	1,083	17.80

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins week ending October 5, 2019 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv)

[‡]Incidence Rate per 100,000 population

Figure 3. Number of Laboratory-positive[†] Influenza Cases and Case Rates by Region, Missouri, CDC Week 47 (November 17, 2019 – November 23, 2019)^{*,‡}

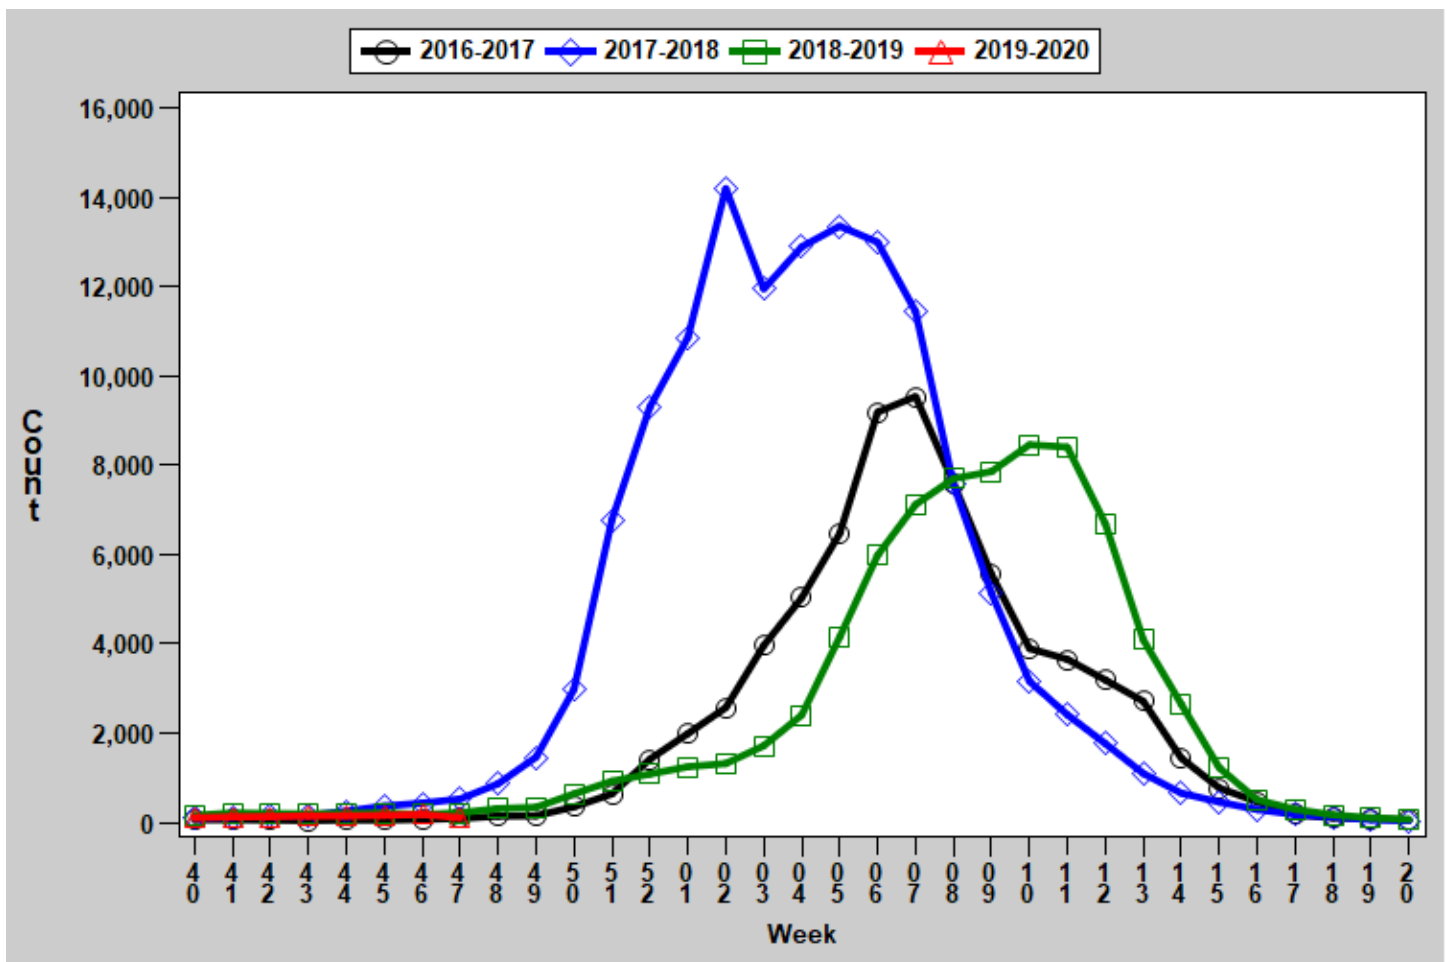

Region	Week 47 Cases	Week 47 Rate [‡]	2019-2020* Season-to-Date	2019-2020* Season-to-Date Rate [‡]
Central	14	2.07	158	23.34
Eastern	28	1.24	321	14.16
Northwest	21	1.31	195	12.21
Southeast	22	4.66	213	45.16
Southwest	18	1.68	196	18.30
Total	103	1.69	1,083	17.80

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

[‡]Incidence Rate per 100,000 population

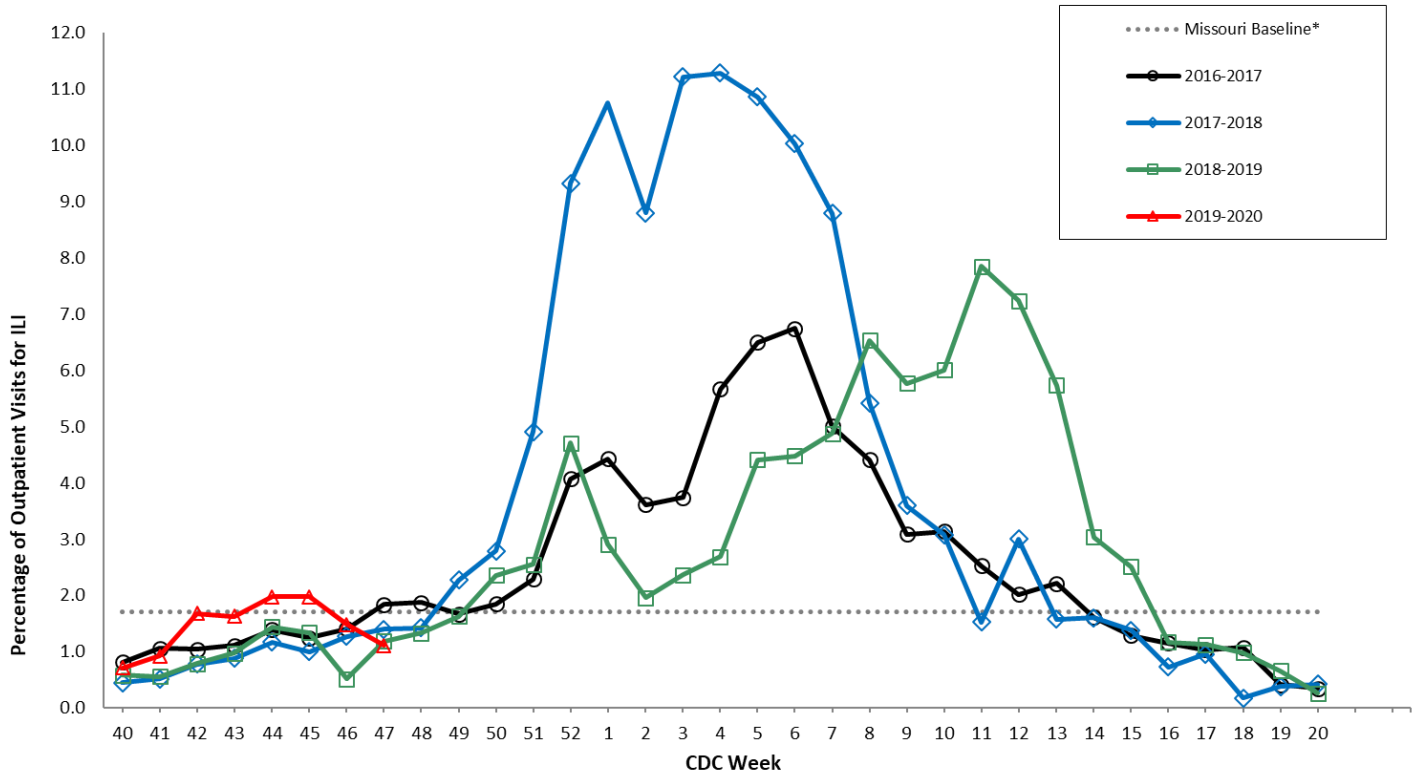

Figure 4. Number of Laboratory-positive[†] Influenza Cases by CDC Week, Missouri, 2016-2020*

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*2019-2020 season-to-date through the week ending May 16, 2020 (Week 20).Data Source: Missouri Health Information Surveillance System (WebSurv).

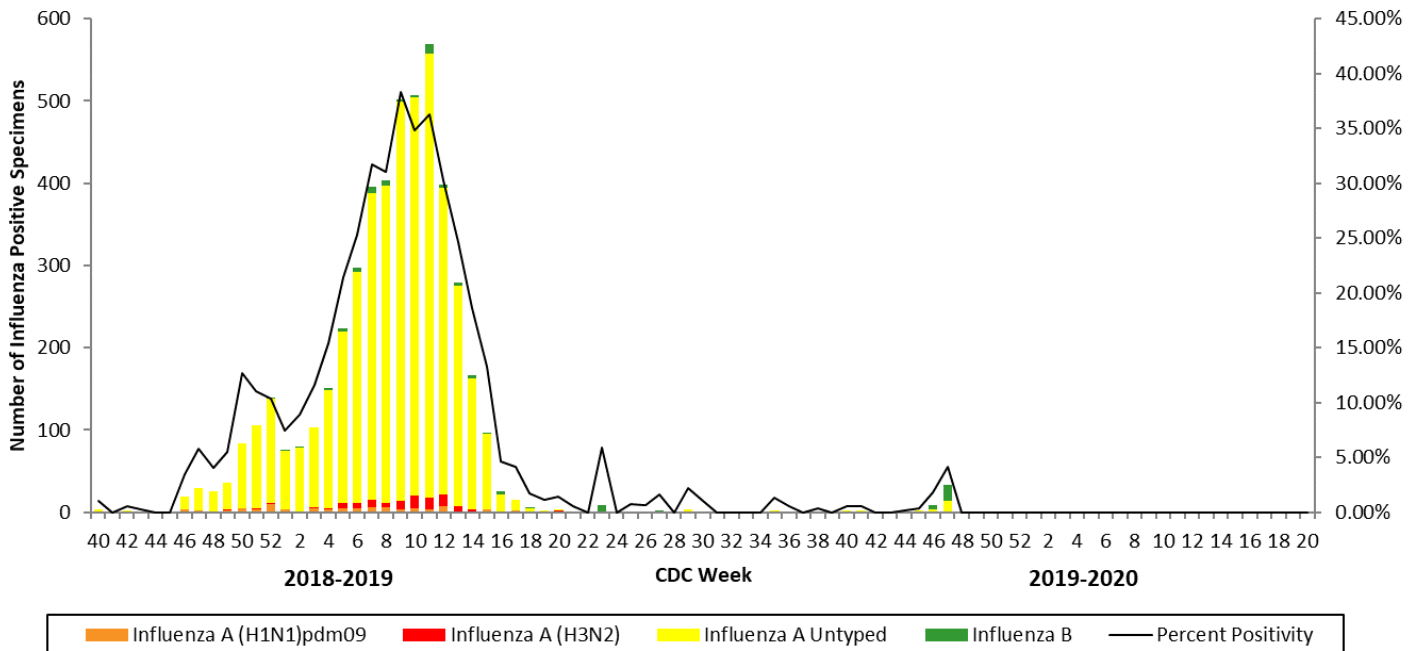

Figure 5. Percentage of Outpatient Visits for Influenza-like Illness (ILI), Missouri Outpatient ILI Surveillance Network (ILINet) 2016-2020*†

*The ILINet Region 7 (MO, IA, KS, NE) baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons, plus two standard deviations. A non-influenza week is defined as periods of two or more consecutive weeks in which each week accounted for less than 2% of the season's total number of specimens that tested positive for influenza. Data Source: U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), Centers for Disease Control and Prevention (CDC).

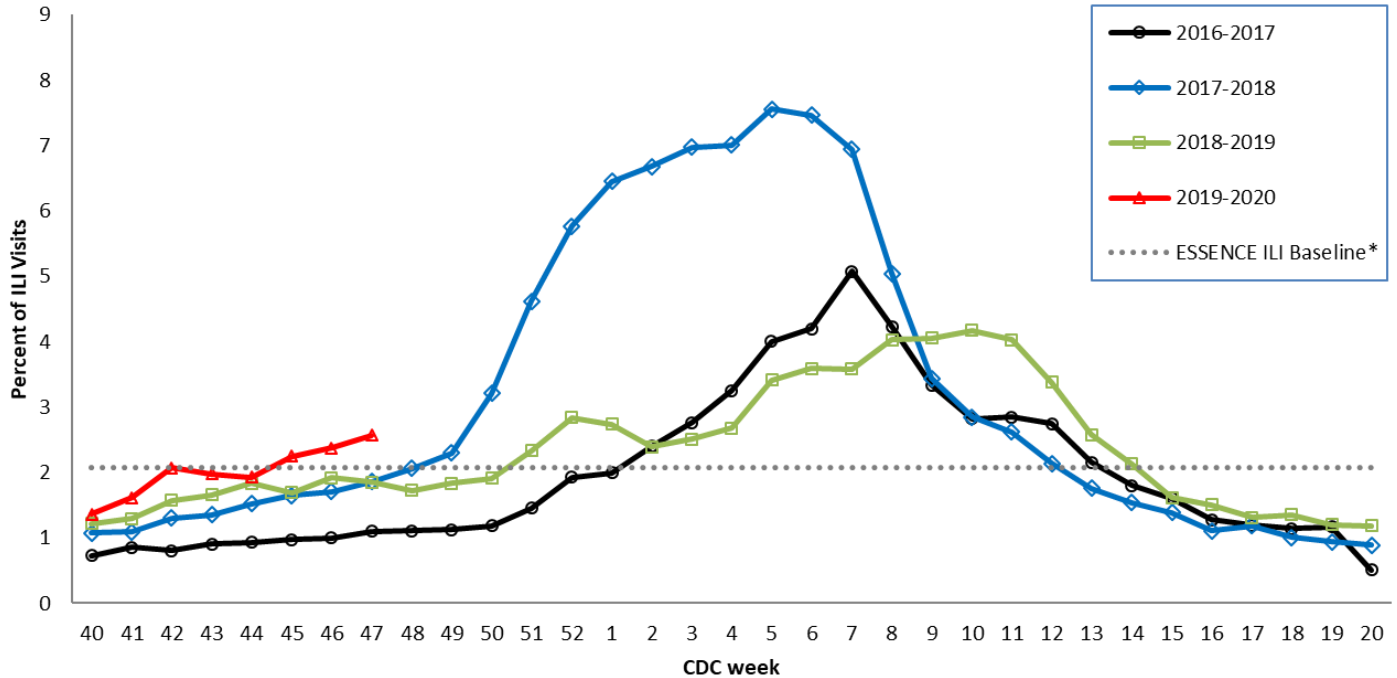

†2019-2020 season-to-date through the week ending May 16, 2020 (Week 20).
